Bulk management

Updated: Nov 10, 2025

If a template already exists with a matching name and language, the template will be updated with the contents of the request, otherwise, a new template will be created.

Post Body

Properties

All [template creation properties](#) are supported, with these exceptions:

The `language` property is not supported. Instead, use `languages` and set its value to an array of [language and locale code](#) strings. For example: `["en_US", "es_ES", "fr"]`. The `text` property is not supported. The `autofill_text` property is not supported.

Revision #5
