Bypassing the phone number addition screen

Updated: Nov 14, 2025

This document describes how to customize Embedded Signup to bypass the [phone number addition screen](#) (shown below) and [phone number verification screen](#).

If you don't want your business customers to have to enter or choose a business phone number in the phone number addition screen, you can customize Embedded Signup to skip the screen entirely. However, after a customer successfully completes the customized flow, you must [programmatically create and register their business phone number](#), or build a UI in your app that allows them to do this.

Enabling the feature

To enable this feature, set `featureType` to `only_waba_sharing` in the [launch method and callback registration](#) portion of the Embedded Signup code:

```
// Launch method and callback registrationconst launchWhatsAppSignup =()=>{
  FB.login(fbLoginCallback,{
    config_id:'<CONFIGURATION_ID>',// your configuration ID goes here
    response_type:'code',
    override_default_response_type:true,
    extras:{
      setup:{},
      featureType:'only_waba_sharing',// set to only_waba_sharing
      sessionInfoVersion:'3',}});};
```

When a business customer successfully completes the flow, the [session logging message event](#) will have `event` set to `FINISH_ONLY_WABA`:

```
{
  data: {
    phone_number_id: "<CUSTOMER_BUSINESS_PHONE_NUMBER_ID>",
    waba_id: "<CUSTOMER_WABA_ID>"
  },
  type: "WA_EMBEDDED_SIGNUP",
  event: "FINISH_ONLY_WABA",
  version: 3
}
```
