

Meta Graph API - Application Connected Client Businesses | Developer Documentation

Meta Graph API - Application Connected Client Businesses

Copy for LLM

[View as Markdown](#)

Version

API for retrieving connected client businesses associated with a Meta application. This endpoint allows applications to retrieve information about businesses that have established client connections through the application. This is essential for managing business relationships and understanding client business configurations.

GET `/{{Version}}/{{Application-ID}}/connected_client_businesses`

Retrieve a list of client businesses connected to the specified application.

Use Cases:

Monitor application-business client relationships

Verify connected business configurations

Retrieve business connection status and details

Manage client business access and permissions

Rate Limiting:

Standard Graph API rate limits apply. Use appropriate retry logic with exponential backoff.

Caching:

Business connection data can be cached for moderate periods, but status information may change.

Implement appropriate cache invalidation strategies.

Request Syntax

Try it

Select language

Select status code

Header Parameters

User-Agentstring

The user agent string identifying the client software making the request.

Authorizationstring·required

Bearer token for API authentication. This should be a valid access token obtained through the appropriate OAuth flow or system user token.

Path Parameters

Versionstring·required

Graph API version to use for this request. Determines the API behavior and available features.

Application-IDstring·required

Your Meta Application ID. This ID is provided when you create the application and can be found in your App Dashboard.

Query Parameters

fieldsstring

Comma-separated list of fields to include in the response. If not specified, default fields will be returned (id, name, verification_status, business_status).

Available fields: id, name, verification_status, business_status, created_time, updated_time

limitinteger [min: 1, max: 100]

Maximum number of connected client businesses to return per page. Default is 25, maximum is 100.

afterstring

Cursor for pagination. Use this to get the next page of results.

beforestring

Cursor for pagination. Use this to get the previous page of results.

Responses

Retrieve a list of client businesses connected to the specified application.

Use Cases:

Monitor application-business client relationships

Verify connected business configurations

Retrieve business connection status and details

Manage client business access and permissions

Rate Limiting:

Standard Graph API rate limits apply. Use appropriate retry logic with exponential backoff.

Caching:

Business connection data can be cached for moderate periods, but status information may change. Implement appropriate cache invalidation strategies.

200

Successfully retrieved connected client businesses

Content Type: application/json

Schema: ConnectedClientBusinessesResponse

Show child attributes

ConnectedClientBusinessesResponse

dataarray of ConnectedClientBusiness

Array of connected client businesses

Show child attributes

data[]ConnectedClientBusiness

Connected client business information and configuration

Show child attributes

idstring·required

Unique identifier for the connected client business

namestring·required

Name of the connected client business

verification_statusBusinessVerificationStatus

Verification status of the connected client business

business_statusBusinessStatus

Current status of the connected client business

created_timestring (date-time)

Timestamp when the business connection was created

updated_timestring (date-time)

Timestamp when the business connection was last updated

pagingCursorPaging

Cursor-based pagination information

Show child attributes

cursorobject

Show child attributes

beforestring

Cursor pointing to the start of the page of data

afterstring

Cursor pointing to the end of the page of data

previousstring

URL for the previous page of results

nextstring

URL for the next page of results

400

Bad Request - Invalid parameters or malformed request

Content Type: application/json

Schema: GraphAPIError

Show child attributes

GraphAPIError

errorobject.required

Show child attributes

messagestring.required

Human-readable error message

typestring.required

Error category type

codeinteger.required

Numeric error code

error_subcodeinteger

More specific error subcode when available

fbtrace_idstring

Unique identifier for debugging and support requests with Meta

is_transientboolean

Indicates whether this error is temporary and the request should be retried

error_user_titlestring

User-friendly error title for display purposes

error_user_msgstring

User-friendly error message for display purposes

401

Unauthorized - Invalid or missing access token

Content Type: application/json

Schema: GraphAPIError
