

WhatsApp Business API - WhatsApp Account Number API | Developer Documentation

WhatsApp Business API - WhatsApp Account Number API

Copy for LLM

[View as Markdown](#)

Version

API for retrieving WhatsApp Account Number details and configuration information.

This endpoint allows businesses to retrieve comprehensive information about their WhatsApp Account Numbers, including status, verification details, and configuration settings.

GET `/v{Version}/waba/{WhatsApp-Account-Number-ID}`

Retrieve comprehensive details about a WhatsApp Account Number, including its current status, verification information, quality rating, and configuration settings.

Use Cases:

Monitor account number status and quality rating

Verify account number configuration before messaging operations

Check verification and approval status

Retrieve display name and business profile information

Rate Limiting:

Standard Graph API rate limits apply. Use appropriate retry logic with exponential backoff.

Caching:

Account number details can be cached for short periods, but status information may change frequently. Implement appropriate cache invalidation strategies.

Request Syntax

Try it

Select language

Select status code

Header Parameters

User-Agentstring

The user agent string identifying the client software making the request.

Authorizationstring·required

Bearer token for API authentication. This should be a valid access token obtained through the appropriate OAuth flow or system user token.

Path Parameters

Versionstring·required

Graph API version to use for this request. Determines the API behavior and available features.

WhatsApp-Account-Number-IDstring·required

Your WhatsApp Account Number ID. This ID represents the account number entity and can be obtained from your WhatsApp Business Account phone numbers list.

Query Parameters

fieldsstring

Comma-separated list of fields to include in the response. If not specified, default fields will be returned (id, display_phone_number, status).

Available fields: id, display_phone_number, verified_name, status, quality_rating, country_code, country_dial_code, code_verification_status, name_status, messaging_limit_tier, account_mode, certificate, is_official_business_account

Responses

Retrieve comprehensive details about a WhatsApp Account Number, including its current status, verification information, quality rating, and configuration settings.

Use Cases:

Monitor account number status and quality rating

Verify account number configuration before messaging operations

Check verification and approval status

Retrieve display name and business profile information

Rate Limiting:

Standard Graph API rate limits apply. Use appropriate retry logic with exponential backoff.

Caching:

Account number details can be cached for short periods, but status information may change frequently. Implement appropriate cache invalidation strategies.

Bad Request - Invalid parameters or malformed request

Content Type: application/json

Schema: GraphAPIError

Show child attributes

GraphAPIError

errorobject·required

Show child attributes

messagestring·required

Human-readable error message

typestring·required

Error category type

codeinteger·required

Numeric error code

error_subcodeinteger

More specific error subcode when available

fbtrace_idstring

Unique identifier for debugging and support requests with Meta

is_transientboolean

Indicates whether this error is temporary and the request should be retried

error_user_titlestring

User-friendly error title for display purposes

error_user_msgstring

User-friendly error message for display purposes

401

Unauthorized - Invalid or missing access token

Content Type: application/json

Schema: GraphAPIError
